

CONTACTLESS TEMPERATURE KIOSK

FrankMayer
AND ASSOCIATES, INC.

The best temperature screening kiosk for touch-free monitoring, the Contactless Temperature Kiosk quickly checks body temperatures using an infrared sensor on the wrist.

KIOSK FEATURES

Available for use as a pass/fail option or customized with health compliance questions, the temperature kiosk is an efficient way to screen groups of people using a fast and accurate wrist scanner. Features include:

PASS/FAIL CONVENIENCE OR HEALTH COMPLIANCE QUESTIONS

The kiosk can offer quick pass/fail results to reduce wait times or provide more comprehensive screening using customizable questions regarding health symptoms.

INFRARED TEMPERATURE SENSOR TECHNOLOGY

Temperature sensing technology measures body temperature through the wrist and is accurate within a half degree Fahrenheit.

REAL-TIME DATA

Text or email alerts are immediately sent to designated individuals regarding health screening and temperature data.

SECURE RECORD OF COMPLIANCE TRACEABILITY

Answers to screening questions and temperature readings are recorded using nondescript user identification.

Software powered by  **DATA DISPLAY**
ENGINEERED SOLUTIONS

THE SCREENING PROCESS

1 An employee or visitor is greeted by a welcome screen and instructed to scan his or her badge on the RFID reader before answering compliance questions or taking a wrist temperature reading on the side of the kiosk.

2 If body temperature is normal and health questions are compliant, the screen welcomes the individual and alerts them they have passed.

3 If an employee or visitor screens as noncompliant, a message appears on screen asking the person to step aside and wait for a second verification.

WHAT HAPPENS IF SOMEONE IS NON-COMPLIANT?

If a person is flagged for a screening question or reports a temperature above normal, the system can send separate alerts or text messages to different individuals in the company.
