

DIGITAL SIGNAGE SOLUTIONS

Bring your communications to life with Nanonation's content management for digital signage solutions. Turn any screen into a powerful digital marketing and communications tool with our cloud-based solution. You are covered for corporate, retail, or educational purposes when it comes to keeping everyone in your office on the same page, delivering the right message to the right customer, or highlighting students, events, and donors.

ABOUT COMMANDPOINT CMS

From updating a single sign in a tradeshow booth or lobby to managing a distributed network of thousands of screens, Commandpoint is here to make life easier for content managers. Meta-data-driven grouping, sorting, and filtering options make managing a global retail store network as simple as a one-location digital menu.

Commandpoint allows brands to manage content and monitor signage networks from anywhere in the world. Drag and drop items into your playlist, then schedule the time you want your new content to publish. It equips you with the tools to produce beautifully animated content in minutes. With a library of dozens pre-made templates that you can easily edit to make your own.

DIGITAL SIGNAGE SOLUTIONS

COMMANDPOINT + SoC

Our enterprise-class CMS is paired with three powerful System-on-Chip platforms: Samsung, LG, and Sony provide an easy-to-deploy digital signage solution. The benefit of using SoC solutions is that they allow customers to deploy standard digital signage quickly and easily, at lower costs, and with minimal infrastructure. Because the digital signage player is integrated into the screen, requiring no additional player device, all a user must do to deploy a digital sign is hang the screen on the wall, provide power, and connect to Wi-Fi.

In addition to SoC, we support a wide range of platforms including Windows, MacOS and Brightsign, allowing you to select the right platform(s) for your needs. All while being managed and controlled from a single enterprise-class, web-based CMS tool. Effortlessly manage content and monitor your network from anywhere in the world from an easy-to-use cloud-based platform.
